

Enhancing Your Course or Research with Real-World Data

Wednesday January 23, 2019 4-4:30PM

222 CVM, College of Veterinary Medicine Boardroom
(501 DW Brooks Drive, Main Campus)

Mackenzie Carter, MS Comparative Biomedical Sciences ('18) Smithsonian Environmental Research Center (SERC)

There may be an opportunity to embed “Citizen Science” data collection projects into your course or research. This approach could be used to scale the number of available research projects for Experiential Learning or add a new component to a lecture class.

Mackenzie Carter is a recent UGA graduate who is interning at the Smithsonian Environmental Research Center (SERC) in Maryland. She is involved in connecting volunteers to SERC citizen science projects. She will explain the SciStarter (<https://scistarter.com/>) platform, how to participate, and potential benefits.

She will talk (15 minutes) and answer questions (15minutes) so that potential adopters can get first-hand information about this program.
